Profile Summary

Data Engineer with 5+ years designing and automating large-scale data platforms on GCP and Azure using Apache Airflow, Python, and SQL. Delivered a Python + GenAI accelerator that reduced manual migration effort by 65% across 300+ enterprise applications, and currently building Agentic AI solutions - including an RCA Analyzer, cloud discovery accelerator, and Cost Optimization tool. Claude Certified Architect (Foundations), Gemini Enterprise Agent Development (Google), and Google Cloud Professional Data Engineer certified, with hands-on expertise in automation, analytics, and GenAI/Agentic AI-powered solutions.

Experience

Accenture | Gurugram, India

Team Lead/Consultant

Dec 2025 - Present

- Leading development of a **Cost Optimization tool** powered by Agentic AI to analyze GCP spend and recommend savings; driving the Regulatory Reporting workstream for compliance delivery.
- Developed an **Agentic AI-powered cloud discovery accelerator** using Google Gemini LLM to analyze GCP codebase, extract Airflow DAG lineage, resolve cross-file dependencies, and generate interactive HTML flow visualization.
- Built an **Agentic AI-driven RCA Analyzer and Pipeline Debugger** using Gemini 2.5 Pro to automate root cause analysis (RCA) of pipeline failures, generating structured incident reports with confidence-scored diagnostics, recommended fixes, and historical incident correlations - reducing debugging time by 30%.
- Lead and mentor 4 engineers to drive higher-complexity data migration and platform engineering tasks, including **designing, reviewing, and optimizing data pipelines and migration workflows**, while coordinating with cross-functional teams.

Senior Analyst

June 2024 - Nov 2025

- Worked in a **12-member Discovery Team** to analyze **300+ applications** for migration from on-prem to GCP, focusing on data flows, dependencies, and migration feasibility.
- Developed a Python-based accelerator automating discovery and migration, **cutting manual effort by ~65%**; integrated **GenAI/Agentic AI (Gemini)** to boost accuracy by **40%** and reduce manual effort by a further **~20%**.
- Designed and delivered key data-governance features** including metadata management, alerting, approvals, audit trail, and Archer integration. Oversaw requirement gathering, POC documentation, cross-team coordination, and testing.
- Created **schemas and process workflows** for a request approval and audit trail system, ensuring accurate tracking, event categorization, and data traceability.
- Led **requirement analysis and story creation** for new features, collaborating with development teams to ensure timely, high-quality delivery across all lifecycle phases.

Tata Consultancy Services | Pune, India

Oct 2021 - May 2024

Systems Engineer

- Migrated **end-to-end data pipelines** from on-prem to GCP using Airflow, improving performance and reducing cost.
- Built **Airflow DAGs** and **Google Cloud Functions** converting raw CSVs into structured PDFs sent to **100+ stores daily**.
- Streamlined user workflows by building **automated pipelines** that sent real-time status notifications to team channels; reduced **issue response time** by creating analytical workbooks using **KQL** in Log Analytics Workspace.
- Performed **data modeling, bucket creation, code reviews, and QA validation** to ensure data integrity; Documented operations, alert handling, monitoring, and resolution to enhance team efficiency.

Technical Skills

Programming and Querying: Python, SQL, HQL, Advanced Excel

Cloud & Orchestration: GCP, Microsoft Azure, Apache Airflow, Supabase

AI Platforms: Gemini, Claude, Copilot, Agentic AI (LLM agents), Antigravity, Prompt Engineering

Tools & Software: PyCharm, VS Code, DBeaver, DataGrip, Git, IntelliJ, Postman, SSMS, Power BI, Rally, Confluence, SharePoint, JIRA, Teradata, Informix

Projects/Publications

- SuKhet.com:** Built an end-to-end **farm-to-table marketplace** website using Agentic AI — covering design, development, and deployment.
- Portal-Based Smart Billing System:** Led a 4-member team to build an IoT-based billing platform with alerts, tamper detection, and power cutoff automation. Published a paper on this in the [SKIT Research Journal](#). Software used: Keil uVision Compiler, Proteus 8 Professional, Arduino IDE, VS Code, Brackets, and SQL Server.

Education

Bachelor of Technology in Electronics and Communication | SKIT | Jaipur, India

Aug 2017 - Sep 2021

Certifications and Achievements

- Awards:** Received multiple client and company awards, appreciation and recognition including STAR of the Month and the ACE Award.
- Certifications:** Claude Certified Architect – Foundations, Gemini Enterprise Agent Development (Google), Google Cloud Professional Data Engineer, Microsoft Azure Fundamentals (AZ-900) (Udemy), Associate Cloud Engineer (Udemy & Google Cloud).
- Activities:** Building a [personal portfolio website](#); Volunteered at the Jaipur Literature Festival 2020.
